## STOP DIGGING

Hello everyone - Happy Spring!

There's an old saying that says if you find yourself in a hole, the first thing you need to do is stop digging. That is what the March 18 presentation was about – how to stop putting carbon into our atmosphere by using a new and clean energy source: Low Energy Nuclear Reaction (LENR). It isn't ready to be rolled out to all our homes just yet, but it holds great promise. Until we stop the output of carbon, we will keep finding ourselves getting deeper and deeper into the proverbial hole. Thanks to those who joined us for Steve Bannister's presentation. If you missed it, you may read his three-part blog (links below) or watch the recording [HERE](#)

We are excited to announce our second speaker of 2024. On Tuesday, May 7, at 7:00 pm MT, Stephanie Feldstein from the Center for Biological Diversity will share with us her take on how population is affecting biodiversity in Utah and the western states. Please join us for this virtual presentation via Zoom by clicking below
